Table 1 - Waste Arisings by Types - 1995

| Type | Quantity |
|---------------|----------------|
| Type A | 103,544 tonnes |
| Type B and C | 79,720 tonnes |
| Special Waste | 4 tonnes |

(Source - Environment Agency)

- Type A - Material for which, in bulk, the environmental impact of decomposition is less than, or comparable with, that of topsoil.
- Type B - Material which, in bulk, may decompose slowly, but in its deposited form is only slightly soluble in water.
- Type C - Material which may decompose (rapidly) and may contain soluble matter which could cause pollution if allowed to enter ground or surface water systems.
