

Clipper DL Download Service

Supported Portable Media Players

You can listen to audiobooks on a wide range of portable listening devices, including portable media players Apple, Creative Labs, Samsung, Toshiba, and other manufacturers.

To have an optimal experience when listening to an audiobook, it is recommended that you select devices that support features such as bookmarking and full time stamping, and have a storage capacity of at least 1GB, since the average CD quality eAudiobook file size is 140 MB.

Please note: not all devices will support every file format. The following portable media players have been tested by OCLC and are compatible with one or both Clipper DL audiobook file formats. For players that will provide the best listening experience, look for the Preferred Device icon.

Please visit <http://www.oclc.org/audiobooks/techspecs/devices.htm> for the latest list of supported portable media players.

Key to device compatibility:

Icon	Compatibility
	Compatible with Media Centre
	Plays DRM-free MP3 Files
	Plays secure WMA files
	Preferred device
